

Employment Opportunities

At Holtec Asia, we endeavor to provide a dynamic and technologically advanced work environment in which every associate can participate enthusiastically, with the peace of mind and security of working in a stable company. Careers are built on knowledge and experience. We offer motivating and engaging job opportunities in a variety of areas, while supporting professional growth. Our work culture fosters and promotes diversity and equal opportunity. We do not discriminate on the basis of caste, religious or political affiliation, gender, nationality, age, sexual orientation or disability.

Join Holtec Asia's team of dynamic professionals and experts to fulfil your aspirations, foster your career growth and be rewarded and recognized for your success. Explore current career opportunities at Holtec Asia today. All positions are permanent, long term, and carry compensation and benefits as per industry standards.

Senior Manager, Hybrid Solar Plant (HSP) Operations

Position Code: SMHSP/CETC/2024/8.

Background

Holtec is a technology company focused on the development of clean energy technologies which include its SMR-300 Small Modular Reactor for generating Nuclear Energy, its Green Boiler Thermal Energy Storage (TES) technology, and its next generation Hybrid Solar Plant (HSP). Holtec is unique in that it has advanced manufacturing facilities with the capability to manufacture all of the products it has developed.

Holtec believes that the Concentrated Solar Plant Technology (CSP) can be improved to make it commercially competitive with other forms of clean energy. Holtec has developed improvements to the solar field and power tower design to enhance the ability to capture solar energy and is integrating it with its Green Boiler thermal energy storage (TES) and delivery technology to supply thermal energy in the form required for power generation and various industrial applications.

Role Summary:

The Senior Manager for Hybrid Solar Plant (HSP) Operations will lead and manage the operation, maintenance, and optimization of an advanced hybrid solar plant. This facility integrates cutting-edge Concentrated Solar Power (CSP) technology with a Green Boiler system, alongside Photovoltaic (PV) solar panels and a Battery Energy Storage System (BESS). The role requires a deep

understanding of renewable energy systems, energy storage, and the technical, financial, and regulatory aspects of hybrid power generation.

Responsibilities:

- **Operations Management:** Oversee the daily operations of the Hybrid Solar Plant, ensuring maximum efficiency, reliability, and performance of CSP, PV, Green Boiler, and BESS systems.
- **Team Leadership:** Lead a multidisciplinary team of engineers, technicians, and support staff, providing direction, training, and performance management to ensure high operational standards.
- **Project Planning and Implementation:** Manage the integration of new technologies and upgrades to the existing systems. Ensure seamless coordination between CSP, PV, Green Boiler, and BESS components.
- **Technical Expertise:** Provide technical guidance and support for the operation, troubleshooting, and optimization of hybrid solar technologies. Stay updated with industry trends and emerging technologies.
- **Regulatory Compliance:** Ensure that all operations comply with local, state, and federal regulations, as well as environmental standards. Manage documentation and reporting for regulatory bodies.
- **Budgeting and Financial Management:** Develop and manage budgets for the operations, maintenance, and upgrading of plant systems. Monitor and control operational expenses to achieve financial targets.
- **Performance Monitoring and Reporting:** Implement and maintain monitoring systems to track plant performance metrics. Generate regular reports on energy production, system efficiency, and other key performance indicators (KPIs).
- **Stakeholder Management:** Liaise with internal and external stakeholders, including regulatory agencies, contractors, suppliers, and local communities, to ensure smooth plant operations and project alignment with company goals.
- **Safety and Environmental Stewardship:** Promote a culture of safety and environmental responsibility, ensuring all plant operations adhere to the highest safety standards and environmental protocols.
- **Innovation and Continuous Improvement:** Identify opportunities for innovation and improvement in plant operations, technology integration, and energy management strategies.

Education and Experience Requirements:

- **Education:** Bachelor's degree in electrical engineering, Mechanical Engineering, Renewable Energy, or a related field. A master's degree is preferred.
- **Experience:** At least 8-10 years of experience in the renewable energy sector, with a focus on solar power and energy storage systems. Experience with hybrid systems, CSP, PV, and BESS is essential.

Leadership:

- Proven experience in leading and managing teams in a high-tech, dynamic environment.

Problem-Solving:

- Strong analytical and problem-solving skills with a track record of optimizing complex systems.

Communication:

- Excellent verbal and written communication skills. Ability to communicate complex technical concepts to non-technical stakeholders.

Mandatory professional qualifications or licenses:

- **Technical Skills:** Strong understanding of hybrid solar plant technologies, including CSP, PV, Green Boiler systems, and BESS. Proficiency in energy management systems (EMS) and plant management software.
- Professional Engineering (PE) license, PMP certification, or other relevant certifications are a plus.

Other:

- Ability to work in a fast-paced, dynamic environment. Willingness to travel as required.
